

SPRAY CONVEYOR

SPRAYING SECTION

SPRAY CONVEYOR

The most efficient and sustainable Spraying system.

A conveyor spraying system equipped with a cabin entirely made of 316 stainless steel; and equipped with the most innovative technology to ensure maximum productivity and efficiency for your production line; while respecting the environment.

Features

INFLATABLE
DUMMIES

AUTOMATIC
UNLOADING

3-LEVEL
FILTERING

SMALL
FLOORPRINT

Our Spray Conveyor is equipped with inflatable dummies that have an adjustable pressure control system, they recognize the size of the garments and automatically stop inflating, and they can automatically rotate, making the production smooth and efficient.

The Spray Conveyor has an automatic unloading system that reduces manual movements to a minimum and makes the production cycle smooth for the operator.

SYSTEM

Our Spray Conveyor is the most sustainable in the market, having a three-level filtering system that ensures that only clean air goes out into the environment. The three levels are the water pipe with spray nozzles, the specially designed and patented ECO-PLUS system (a wet labyrinth made of PVC fins that trap and eliminate chemical particles).

The floor print of the conveyor is reduced to the minimum by placing the cabin internally, thus taking up as little space as possible.

Technical specs

Dimensions

SPRAY CONVEYOR
16/18/22 dummies
Length: 9000 / 9000 / 11000 mm
Width: 4500 / 4560 / 4560 mm
Height: 3600 mm
Weight: 3300 / 3900 / 4500 kg

Productivity

It depends on operator and effect
